

4 Courses

Introduction to Self-Driving Cars

State Estimation and
Localization for Self-Driving
Cars

Visual Perception for Self-
Driving Cars

Motion Planning for Self-Driving
Cars

08/18/2019

Guangyao Yang

has successfully completed the online, non-credit Specialization

Self-Driving Cars

This Specialization gives you a comprehensive understanding of state-of-the-art engineering practices used in the self-driving car industry. By interacting with real data sets from an autonomous vehicle (AV), you'll implement methods for static and dynamic object detection, localization and mapping, behaviour and maneuver planning, and vehicle control — all through hands-on projects using the open source simulator CARLA. You'll learn from a highly realistic driving environment that features 3D pedestrian modeling and environmental conditions. When you complete the Specialization successfully, you'll be able to build your own self-driving software stack and be ready to apply for jobs in the autonomous vehicle industry.

Associate Professor,
Aerospace Studies
Director, Toronto
Robotics and Artificial
Intelligence Laboratory

Assistant Professor,
Aerospace Studies
Director, Space &
Terrestrial Autonomous
Robotic Systems
Laboratory
